EDUCATION AND SCHOLASTIC ACHIEVEMENTS

VIT, Vellore

2023–2027

Bachelor of Technology in Computer Science (IoT) – 8.62 CGPA

Gear Innovative International School

2023

12th Grade (CBSE) – 95.2%

EXPERIENCE

AI Product Engineer Intern

May-June 2026

Health Vectors

Bangalore, India

- Conducted requirement gathering with the CEO and CTO of a multi-geography B2B health-tech company, translating ambiguous pain points around a growing pipeline (130+ leads and clients across India, GCC, and Malaysia) into a fully specified product.
- Led the design and development of an AI-powered sales dashboard replacing a legacy Excel lead sheet, owning architecture, data schema, API design (15+ endpoints), and UI/UX across 4 screens; decisions validated with CTO before build
- Integrated OpenAI Whisper (STT) and an LLM pipeline enabling the CEO to dictate client interactions by voice; system automatically extracts tasks and summarises notes, eliminating manual data entry
- Implemented Microsoft Azure AD authentication (MSAL) with an email allowlist, restricting access to authorised company users only
- Containerised the full stack (FastAPI backend + Next.js frontend) using Docker. Managed secrets via Infisical vault, keeping all credentials out of source code
- System is actively in daily use by the CEO and his team across phone and laptop

PROJECTS

NotesAssistant | RAG-based Study Material Q&A System

- Engineered a Retrieval-Augmented Generation system for semantic search over lecture materials using LangChain and FAISS vector indexing
- Implemented batch processing for document embedding to reduce memory usage from >4GB to <1GB for large PDF files
- Leveraged BGE embeddings with recursive text splitting for context-preserving document chunking

Spotify Helper Agent | Natural Language Music Control

- Built a ReAct agent using LangChain and Gemini that translates natural language into Spotify Web API actions
- Integrated OAuth 2.0 authentication flow for secure user authorization and token management
- Extended agent capabilities with Last.fm and SerpAPI tools for music discovery and recommendations

TalkCrates | Self-Dialogue Journal Web Application

- Architected and built a self-dialogue journaling web app (React, TypeScript) with a zero-server-storage design, persisting all conversation data client-side in a WebAssembly-compiled SQLite database (sql.js)
- Engineered an async, promise-based client-side storage layer with an IndexedDB write-through cache and a serialized write queue, eliminating race conditions on concurrent writes and keeping data reliably synced in-browser without a server round-trip
- Built a client-side zip export/import pipeline (zip.js) giving users full ownership and portability of their data.

TECHNICAL SKILLS

Programming Languages: Python, C, C++, SQL

AI/ML Stack: LangChain, RAG, FAISS, BGE Embeddings

Backend Development: FastAPI, MongoDB, JWT Authentication, REST APIs, OAuth 2.0, IndexedDB, SQL.js

Developer Tools: Git, Docker, Bash, Azure MSAL
